Syllabus For
Master of Pharmacy
(M. Pharm)

(Two year full time course)

Pharmaceutical Biotechnology

Department of Pharmaceutical Sciences
Saurashtra University
Rajkot - 360 005
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I
Interdisciplinary paper - I
Modern Analytical Techniques-I Theory
(Three hours per week, 3 credits)

UNIT-I
UV-VISIBLE SPECTROSCOPY :

INFRARED SPECTROPHOTOMETRY :
Introduction, basic principles, and sampling techniques, interpretation of spectra, applications in Pharmacy. FT-IR, Attenuated Total Reflectance (ATR), Near infra red Spectroscopy (NIR) -theory and applications.

UNIT-II
ATOMIC ABSORPTION AND PLASMA EMISSION SPECTROSCOPY:
Principle, instrumentation, interferences and applications in Pharmacy.

REFERENCE STANDARDS
Reference standards source, preparation, characterization, usage, storage and records.

UNIT-III
NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY
Fundamental Principles and Theory, Instrumentation, solvents, chemical shift, and factors affecting chemical shift, spin-spin coupling, coupling constant, and factors influencing the value of coupling constant, spin-spin decoupling, proton exchange reactions, simplification of complex spectra, FTNMR, 2D -NMR and applications in Pharmacy, interpretation of spectra. C13 NMR-Introduction, Natural abundance, C13 NMR Spectra and its structural applications.

UNIT-IV
MASS SPECTROSCOPY
Basic principles and instrumentation, ion formation and types, fragmentation processes and fragmentation pattern, Chemical ionization mass spectroscopy (CIMS), Field Ionization Mass Spectrometry (FIMS), Fast Atom Bombardment MS (FAB MS), Matrix Assisted laser desorption / ionization MS (MALDI-MS), interpretation of spectra and applications in Pharmacy.

Books Recommended:
1. Instrumental Methods of Analysis - Scoog and West.
3. Instrumental Method of Analysis - Willard Dean & Merrit.
14. IP/BP/USP.
1. Use of colorimeter for analysis of Pharmacopoeial compounds and their formulations.
2. Use of Spectrophotometer for analysis for Pharmacopoeial compounds and their formulations.
3. Simultaneous estimation of combination formulations (minimum of 4 experiments)
   a. Vitamins
   b. Oral antidiabetics
   c. NSAIDs
   d. Antimicrobials
   e. Antihistamines
   f. Antihypertensive etc.
4. Effect of pH and solvent on UV Spectrum of certain drugs.
5. Experiments on flame photometry.
6. Use of fluorimeter for analysis of Pharmacopoieal compounds.
IR, NMR and Mass Spectroscopy – Interpretation of spectra & Structural elucidation
(atleast for 4 compounds each).
7. Any other relevant exercises based on theory.
Unit - I
1. Microbial biotechnology :
   - Bacteria, actinomycetes, fungi, algae and viruses- structure, chemistry, morphology, nomenclature, general classification, molecular & genotypic taxonomy, cultural, physiological and reproductive features, methods of isolation, cultivation, and maintenance of pure cultures. Industrially important micro organisms- examples and applications.
   - Microbial pathology – identifying features of pathogenic bacteria, fungi and viruses, mechanism of microbial pathogenicity, etiology and pathology of common microbial diseases and currently recommended therapies for common bacterial, fungal & viral infections.

Unit - II
2. Molecular Biology :
   - Structure of nucleus and chromosome, Nucleic acids and composition, Different structures of DNA, DNA packaging, C-value paradox, genomic organization in prokaryotes and Archaebacteria. Bacterial characteristics determined by plasmids, Molecular properties of plasmid, Plasmid stability, method for studying plasmids.
   - Central dogma of molecular biology: Replication, Transcription and post-transcriptional/transcriptional controls, transcription factors.
   - Gene regulation: Gene copy number, transcriptional control and translational control. RNA processing: Modification and Maturation, RNA splicing, RNA editing, RNA amplification. Control of diversity in protein synthesis through alternate RNA splicing mechanisms.

Unit - III
3. Cellular Biology :
   - Cell structure & function- cell organelles, cytoskeleton & cell movements, basic aspects of cell regulation, bioenergetics and fuelling reactions of aerobics and anaerobics, secondary metabolism & its applications. Intracellular vesicular traffic, cell communication, cell cycle and apoptosis, mechanism of cell division. Cell junctions/adhesion and extra cellular matrix, germ cells and fertilization, histology – the life and death of cells in tissues.
   - Apoptosis and Oncogenes: - Programmed Cell Death, Tumor cells, Proto-oncogenes, oncogenic mutations, cell cycle & controls, carcinogens & repair.
• Differentiation and Developmental Biology: Fertilization, Events of Fertilization, In-Vitro Fertilization, Embryonic Germ Cells, Stem Cells and its Application

Unit - IV
4. Genomics:
• Basic understanding of genome and its structure & function- genome, difference between eukaryotic and prokaryotic genome, transcriptome, proteome, phylogenetics. : Genes in development, the dynamic genome; DNA in flux, Control of Prokaryotic gene expression. Studying mapping, sequencing human genome & understanding genome sequence, genetic disorders, Positional cloning, mutation, repair & recombination.
• Functional analysis of gene variation, Genotyping techniques, Single Nucleotide Polymorphism, Pharmacogenomic Management.

Books Recommended:
1. Microbiology : Pelczar
2. General microbiology by R.Y. Steiner
3. Essential and application of microbiology, ZUDYKANDAL
4. Actionomyocytes : Waxman S.A.
5. Genomes by T. A. Brown.
7. Genes V And VI by Lewin Benjamin.
8. Biotechnology the biological principles by M. D. Trevan, S. Bofley.
10. Eukaryotic Gene Regulation by David Lachman.
11. Microbial genetics by David Friefelder.
14. Industrial Microbiology by LE Casida
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I (Pharmaceutical Biotechnology)
Subject of Specialization paper – I (Core Subject-II)
Fundamentals of Biotechnology Practical
(Four hours per week, 6 credits)

Practicals: Laboratory examination including oral and practical examination in general course illustrative of theory section in the syllabus -

1. Basic Laboratory Procedure – Instrument Introduction and Handling, Maintenance, Aseptic condition maintenance, Sterilization, Microscopy, etc.
3. Isolation of human DNA, quality assessment by spectrophotometer and gel electrophoresis, restriction digestion of DNA, and separation of DNA fragments by gel electrophoresis, staining of bands with ETH-Br, DNA visualization.
4. Isolation of RNA from microbial sources and estimation.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I (Pharmaceutical Biotechnology)
Subject of Specialization paper – II (Core Subject-III)
Advanced Biochemistry, Bioprocessing and Immunotechnology Theory
(Three hours per week, 4 credits)

Unit – I

1. Biochemistry
   • Brief introduction to carbohydrate metabolism and diseases related to carbohydrate metabolism: Diabetes mellitus, methyl keto urea, galactosmias glycogen storage disease, lactose intolerance and glucose tolerance test.
   • Lipid metabolism: Oxidation of fatty acid, alpha, beta, gamma-oxidation and energetics, control of metabolism, essential fatty acids and eicosinoids, (prostaglandins, thromboxanes and leukotriene) phospholipids, sphingolipids clinical orientation of lipid metabolism. Disease related to lipid metabolism. Hyper lipidamiya, cholesterol metabolism, fatty liver and lipotropic factors, hypolipoproteinous atherosclerosis.
   • Metabolism of ammonia and nitrogen containing monomers: Nitrogen balance, essential amino acid, transamination, deamination, conversion of amino acids to specialized product assimilation of ammonia urea cycle, metabolic disorders, formation of bile salts and pigment and clinical significance.
   • Biological oxidation: Redox potential, energy rich compounds. The respiratory chain, mechanism and energetics of oxidative phosphosporylation, study of cytochromes, bioenergetics, production of ATP and its biological significance.

Unit - II

2. Enzymology :
   • Introduction, classification, general properties of enzymes, sources of enzymes, extraction and purification, Enzyme kinetics, enzyme regulation, applications of enzymology: biological preparations/ analytical reagents, diagnostics, therapeutics, inborn errors of enzymes, of production of important enzymes (examples), Techniques of immobilization of enzymes and their applications in industry, Biosensor technology, Immobilized Enzyme engineering, Kinetics of immobilized enzymes.

Unit - III

3. Immunology :
   • Cellular basis of Immune response, Immunity to Viruses, Bacteria and fungi, Immunodeficiency diseases, Immune system, cells-tissues-organs of immune system, immunological tolerance, immunity to virus, bacteria, fungi, protozoa, worms. Primary and secondary immuno deficiency, autoimmune diseases, cell migration, inflammation, cytokines and cytokine receptors, T cell receptors, MHC, antigen presentation, antibodies and cell cooperation in antibody response, Hypersensitivity TYPE I, II, II, IV, Hypersensitivity reactions, Vaccine technology: Immuno-diagnostics.
- Vaccine technology: conventional vaccines, novel methods for vaccine production, anti-idiotype vaccine, DNA vaccine, genetically engineered vaccine, iscoms, synthetic peptides, and immunodiagnostics
- Hybridoma techniques – fusion methods for myeloma cells and B-Lymphocytes, selection and screening techniques. Production and purification of monoclonal antibodies and their applications in clinical diagnosis, immunotherapy and pharmaceutical research.

Unit - IV

4. Fermentation technology:
- Fermenter design, aeration agitation, mass transfer in fermentation, Reactors of immobilized enzymes: design and application, theory of fermentation system, fermentation kinetics scale up, screening techniques of microorganisms, detailed study of few industrial important microbial metabolites, computerized control of fermentation process: system configuration, Scale up of fermentation processes: principles, theoretical considerations and techniques used, Product recovery, isolation and purification of fermentation products: filtration, solvent extraction, adsorption and partition, paper/gas/thin-layer and ion-exchange chromatography, electrophoresis and counter-current distribution, crystallization, turbidity analysis and cell yield determination, metabolic responses, enzymatic assays, bioautographic techniques, disintegration of cells for product recovery.
- Products of fermentation: Organic solvents (alcohol, acetone, butane) Organic acids (citric acid, lactic and gluconic acid). Antibiotics (penicillin, streptomycin, tetracycline, erythromycin, griseofulvin, neomycin, cephalosporins, ergot alkaloids, vitamins (vitamin C), Amino acids: glutamic acid and lysine.

Books Recommended:
1. Immunology by Ivan Roitt, Jonathan Brostoff and David Male.
2. Immunology by Weir.
5. The foundations of biochemistry by Lehninger.
Multidisciplinary/ Elective Subject-I

SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I
Multidisciplinary / Elective paper - I
Pharmaceutical Preformulation Theory
(Three hours per week, 4 credits)

UNIT – I

General Considerations, Spectroscopy and Assay development, dissociation, partitioning and Solubility of Pharmaceutical Solids, pKa, salts, solvents, K_{o/w}, drug design, phase solubility analysis, solubilization, release, dissolution and permeation, chiral drug substances, characterization scheme.

UNIT – II

Solid state properties, crystal morphology, melting point and its analysis, microscopy and particle size analysis, laws of crystallography, habit, polymorphism, pseudomorphism, isomorphism, purity, solubility, hygroscopicity, study methods for evaluation of solid state.

UNIT - III

Dosage form consideration in preformulation, solid dosage form, solution formulations, emulsion, suspension, freeze dried products, topical, pulmonary, evaluations and its regulatory considerations, stability tastings, order of reaction, antioxidants, chelating agents, impurity, GMP related to bulk drugs and APIs.

UNIT – IV

Characterization of Biopharmaceutical drugs and Phytomedicines.

REFERENCES

1. Modern Pharmaceutics by G. Banker.
10. Solubility and Solubilization in Aqueous Media by S. Yalkowsky.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS  
Semester – I  
Multidisciplinary / Elective paper - I  
Methods in Biological Evaluation of Drugs Theory  
(Three hours per week, 4 credits)

Unit-1  
A. Biological standardization, general principles, Scope and limitation of bio-assay, bioassay of some official drugs.  
B. Preclinical drug evaluation of its biological activity, potency and toxicity-Toxicity test in animals including acute, sub-acute and chronic toxicity, ED$_{50}$ and LD$_{50}$ determination, special toxicity test like teratogenicity and mutagenecity. Various guidelines for toxicity studies. Animal experiments assessing safety of packaging materials.  
C. Selected topics in screening of drugs:  
   a. Recent advances in Transgenic and Knockout animals  
   b. Administration of Neuropeptides and Neurohormones by Intracerebroventricular (ICV) route in rats.  
   c. Screening models for drug abuse like alcohol addiction, dependence and withdrawal syndrome.  
   d. Biostatistics and calculation of doses in experimental pharmacology

Unit-2  
A. Pyrogens: Sources, Chemistry and properties of bacterial pyrogens and endotoxins, Official pyrogen tests  
B. Microbiological assay of antibiotics and vitamins.  
C. Biological evaluation of drugs--Screening and evaluation ( including principles of screening , development of models for diseases : In vivo models / In vitro models / cell line study ) techniques of the following:

Unit-3  
A. Parasympathomimetics, Parasympathetic blocking agents, Sympathomimetics, Sympathetic blocking agents, Ganglion stimulants and blockers, Neuromuscular stimulants and blockers.  
B. General and local Anesthetics, Sedatives and Hypnotics, Antiepileptics, Psychopharmacological agents, Analgesics, Anti-inflammatory agents, Anti-Parkinson’s drugs, CNS Stimulants.  
C. Cardiotonics, Anti-hypertensive drugs, Anti-arrhythmic drugs, Drugs used in Ischemic Heart Diseases, Drugs used in Atherosclerosis.

Unit-4  
A. Drugs used in Peptic Ulcer, Respiratory disorders, Hormone and Endocrine disorders. Anti fertility agents and diuretics.  
B. Various models for Cataract, glaucoma, inflammatory bowel disease
Books recommended (Latest Edition):

1. Screening methods in pharmacology (vol I & II)–R.A. Turner
2. Drug Discovery and Evaluation in Pharmacology assay: Vogel
3. Design and analysis of animal studies in pharmaceutical development, Chow, Shein, Ching.
4. Evaluation of Drug Activity: Pharmacometrics D.R. Laurence
5. Animal and Clinical pharmacologic Techniques in Drug Evaluation-Nodine and Siegler
6. Pharmacology and Toxicology- Kale S.R.
7. Fundamentals of experimental Pharmacology- Ghosh M.N.
Multidisciplinary / Elective paper - I
Pharmaceutical and Industrial Biotechnology Theory
(Three hours per week, 4 credits)

Theory: 4 hours/week (4 Credits)

Unit I
Industrial aspects: Stability studies of biotechnology derived products, Effects of various environmental /processing on stability of the formulation and techniques for stabilization of product against the same regulatory requirement related to stability testing with emphasis on matrixing bracketing techniques, Climatic zones

Unit II
Concept of biotech process validation, Cell lines culture process validation and characterization, Purification process for viral clearance, validation of recovery, Purification, Cleaning, Filtration, Issues of DNA vaccines and plasmid DNA vaccines

Unit III
Analytical methods in protein formulation: concentration, size, purity, surface charge, identity, structure/sequence, shape, activity.

Unit IV
Industrial application of biotech products: industrial enzymes (examples), immobilization of enzymes, their applications in industry, Immobilized Enzyme engineering, Kinetics of immobilized enzymes, novel methods for enzyme and vaccine production.

READING MATERIAL
3. Eugene J. McNally, Jayne E. Hasted, protein formulation and delivery 2\textsuperscript{nd} Ed. Informa-healthcare.

M. Pharm. Semester-II

SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II
Interdisciplinary paper - III
Modern Analytical Techniques-II Theory
(Three hours per week, 3 credits)

UNIT-I
CHROMATOGRAPHIC TECHNIQUES : 15 Hours
  a) Classification of chromatographic methods based on mechanism of separation.
  Theories of chromatographic separation.
  b) Principles, elution techniques, instrumentation, derivatization and applications of gas chromatography, HPLC and HPTLC.
  c) Principles, elution techniques, applications of ion exchange and ion pair chromatography, affinity chromatography, size exclusion chromatography, chiral chromatography, super fluid chromatography (SFC), GC-MS and LC-MS.

UNIT-II
THERMAL METHODS OF ANALYSIS : 5 Hours
Theory, instrumentation and applications of Thermo Gravimetric Analysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC) and Thermo Mechanical Analysis (TMA).

UNIT-III
X-RAY DIFFRACTION METHODS : 4 Hours
Introduction, generation of X-rays, X-ray diffraction, Bragg’s law, X-ray powder diffraction, interpretation of diffraction patterns and applications.

OPTICAL ROTARY DISPERSION : 2 Hours
Principle, Plain curves, curves with cotton effect, octant rule and its applications with example, circular dichroism and its relation to ORD.

UNIT-IV
RADIO IMMUNO ASSAY : 4 Hours

ELECTROPHORESIS : 3 Hours
Theory and principles, classifications, instrumentation, moving boundary electrophoresis, Zone Electrophoresis (ZE), Isoelectric focusing (IEF) and applications.

**Books Recommended:**
1. Instrumental Methods of Analysis - Scoog and West.
3. Instrumental Method of Analysis - Willard Dean & Merrit.
14. IP/BP/USP.
1. Experiments on Electrophoresis.
2. Experiments of Chromatography.
   (a) Thin Layer Chromatography.
   (b) Paper Chromatography.
3. Experiments based on HPLC & GC.
4. Thermaograph – Interpretation of spectra (atleast for 4 compounds each).
5. Any other relevant exercises based on theory.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II (Pharmaceutical Biotechnology)
Subject of Specialization paper – III (Core Subject-IV)
Proteins and Protein Formulations Theory
(Four hours per week, 6 credits)

Unit I
**Protein engineering:** Concepts for protein engineering. Isolation and purification of proteins, Stability and activity based approaches of protein engineering, Chemical and Physical Considerations in Protein and Peptide Stability, Different methods for protein engineering, Site-directed mutagenesis, gene shuffling, and direct evolution

Unit II
**Proteomics:** Protein identification and characterization: Methods/strategies, protein identification, de novo protein characterization, Isotope labelling, N- and C-terminal tags. 2-Dimensional gel electrophoresis -methods (including IPGs), -resolution -reproducibility and image analysis -future developments

Unit III
**Protein formulation:** Different strategies used in the formulation of DNA and proteins, Analytical and biophysical parameters of proteins and DNA in pre-formulation, Liposomes, Neon-spears, Neon-particulate system, Pegilation, Biological Activity, Biophysical Characterization Techniques, Forced degradation studies of protein.

Unit IV
**Methods of protein sequencing:** mass spectrometry, Edman degradation, Tryptic and/or Chymotryptic Peptide Mapping.

READING MATERIAL
1. **H. Lodhish et. Al.** Molecular Cell Biology,. W. H. Freeman and Company
2. Protein Purification – Hand Book – 1998 Amersham pharmacia biotech
6. **David Whitford,** Proteins-Structure and Function (2005), John Wiley & Sons Ltd.
1. Protein Characterization
2. Cell biology
3. Enzyme biochemistry:
4. Recombinant DNA Technology
5. Protein formulations
Unit I

- **Bioinformatics basics**: Computers in biology and medicine Importance of Unix and Linux systems and its basic commands, database concepts, protein and nucleic acid databases. Structural data bases. Biological XML DTD's; Pattern matching algorithm basics.

- **Computational tools for DNA sequence analysis: GCG**: The Wisconsin package of sequence analysis programs, web-based interfaces for the GCG sequence analysis programs.

- **Databases and search tools**: Biological back ground for sequence analysis. Identification of protein sequence from DNA sequence. Searching of databases similar sequence. The NCBI; Publicly available tools, resources at EBI, resources on the web; Database mining tools.

Unit II

- **DNA sequence analysis**: The gene bank sequence database; Submitting DNA sequence to the databases and database searching, sequence alignment, pair wise alignment techniques, multiple sequence analysis, multiple sequence alignment; Flexible sequence similarity searching with the FAST3 program package, the use of CLUSTAL Wand CLUSTAL X for the multiple sequence alignment.
Submitting DNA protein sequence to databases: Where and how to submit, SEQUIN, genome centres; Submitting aligned set of sequences, updates and internet resources.

Unit III

Protein Modeling: Introduction; Force field methods; Energ, buried and exposed residues, side chains and neighbours; Fixed regions, hydrogen bonds, mapping properties onto surfaces; Fitting monomers, rms fit of conformers, assigning secondary structures; Sequence alignment-methods, evaluation, scoring; Protein completion, backbone construction and side chain addition; Small peptide methodology, software accessibility, building peptides; Protein displays; Substructure manipulations, annealing.

Peptidomimetics: Introduction, classification; Conformationally restricted peptides, design, pseudopeptides, peptidomimetics and transition state analogs; Biologically active template; Amino acid replacements; Peptidomimetics and rational drug design; CADD techniques in peptidomimetics; Development of non peptide peptidomimetics.

Protein Structure Prediction: Protein folding and model generation; Secondary structure prediction, analyzing secondary structures; Protein loop searching, loop generating methods, loop analysis; Homology modeling, concepts of homology modeling, potential applications, description, methodology, homologous sequence identification; Align structures, align model sequence; Construction of variable and conserved regions, threading techniques, Topology fingerprint approach for prediction, evaluation of alternate models; Structure prediction on a mystery sequence, structure aided sequence techniques of structure prediction, structural profiles, alignment algorithms, mutation tables, prediction, validation, sequence based methods of structure prediction, prediction using inverse folding, fold prediction; Significance analysis, scoring techniques, sequence-sequence scoring.

Unit IV
Protein-Ligand Docking: Introduction; Docking problems, methods for protein-ligand docking, validation studies and applications; Screening small molecule databases, docking of combinatorial libraries, input data, analyzing docking results, software accessibility; FlexiDock, creating input structures, ligand propositioning, binding pockets, flexible bonds, torsional space, genetic algorithm, scoring.

The virtual library: Searching MEDLINE, Pubmed, current content, science citation index and current awareness services, electronic journals, grants, and funding information.

READING MATERIAL

7. David Posada, Bioinformatics for DNA Sequence Analysis (2008), Humana press.
Multidisciplinary/ Elective Subject-II

SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II
Multidisciplinary / Elective paper – II
NDDS: Multidisciplinary and Regulatory Aspects Theory
(Three hours per week, 4 credits)

UNIT- I  (6 hours)
Introduction and overview of Novel Drug Delivery Systems (NDDSs)
- Particulate Drug delivery (Microshpres, Microcapsules, Nanosheres, Nanocapusels, Polymeric beads, etc.)
- Vesicular Drug delivery (Liposmes, Ethosomes, Neosomes, etc.)
- Insitu gelling systems
- Transdermal Drug delivery
- Microemulsion, Nanoemulsion, Self emulsifying systems, Nanosuspension, etc.
- Targeted Drug delivery
- Liquid and Semisolid preparations
- Sterile products, Cosmetic products and Aerosolized systems.

UNIT- II  (6 hours)
Consideration of various regulations in product development
- Organic volatile impurities
- Trace impurities
- API and product stability
- Product registration

UNIT- III  (6 hours)
Biotechnological Products:
- Formulation development aspects for biotechnological products
- Delivery aspects for biotechnologically derived products (Recombinat DNA, Recombinat proteins, Gene delivery, Enzymes, Hormones, etc.)
- Product stabilization aspects with consideration of ICH QE5 Section.
- Regulatory considerations with consideration of global regulatory guidelines.

UNIT- IV  (6 hours)
Herbal and naturally derived Products:
- Formulation development aspects
- Delivery aspects for herbal and naturally derived medicinal products (Herbal extracts, crud extracts, incorporation of product performance enhancers, etc.)
- Product stabilization aspects with consideration of ICH guideline.
- Regulatory considerations with consideration of global regulatory guidelines.

UNIT- V  (6 hours)
Synthetic and Semisynthetic medicines
- Formulation development aspects
- Delivery aspects for Synthetic and Semisynthetic medicines.
- Product stabilization aspects with consideration of ICH guideline.
- Regulatory considerations with consideration of global regulatory guidelines.

Books Recommended:
3. Pharmaceutical Dispensing by Husa
4. Dispensing Pharmacy by Cooper and Goons
6. www.fda.gov/RegulatoryInformation/Guidances
7. Drug stability (Principles and Practices) by Jens Carstensen
8. Stability of drugs and dosage forms by Yoskioka
9. Modern Pharmaceutics by G. S. Banker
10. Biodegradable polymers as drug delivery systems by Cahsin
11. Biopolymers for medical and pharmaceutical applications, Volumes: I-II by Alexander
    Steinbüchel
12. Controlled drug delivery: Fundamentals and applications by Robinson
14. Nanoparticulate Drug delivery systems by Thassu
15. Novel drug delivery systems by Chein
16. Pharmaceutical Dissolution Testing by Dressman
17. Protein biotechnology: isolation, characterization, and stabilization By Felix Franks
19. Compliance Handbook for Pharmaceuticals, Medical Devices, and Biologics by Carmen medina
20. Herbal Supplements - Drug Interactions: Scientific and Regulatory Perspectives by Y.W. Francis Lam
21. Textbook of Complementary and Alternative Medicine by Chun-su Yuan
22. FDA Regulatory Affairs: A Guide for Prescription Drugs, Medical Devices, and Biologics by Douglas J. Pisano
24. Poucher's Perfumes, Cosmetics and Soaps by H. Butler
25. Nanotechnology in Drug Delivery (Biotechnology: Pharmaceutical Aspects) by Melgardt M. de Villiers
26. Antigen Delivery Systems: Immunological and Technological Issues (Drug Targeting and Delivery) by Bruno Gander
27. Targeted & Controlled Drug Delivery: Novel Carrier Systems by Vyas / Khar
29. Pharmaceutical Gene Delivery Systems (Drugs and the Pharmaceutical Sciences) by Alain Rolland
30. Microparticulate Systems for the Delivery of Proteins and Vaccines (Drugs and the Pharmaceutical Sciences) by Smadar Cohen
31. Protein Formulation and Delivery (Drugs and the Pharmaceutical Sciences) by Eugene J. McNally
32. Herbal Drugs and Phytopharmaceuticals, Third Edition - Hardcover by Max Wichtl
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II
Multidisciplinary / Elective paper – II
Analysis of Recombinant Proteins and Diagnostics Theory
(Three hours per week, 4 credits)

A. Analysis:

Unit I

- **Total protein assay:** Quantitative amino acids analysis, Folin-Lowry protein assay, BCA assay, UV spectrophotometry etc.
- **Purity:** Protein impurities, contaminants, electrophoretic analysis, HPLC based analysis, DNA content analysis, immunological assays for impurities, combined immunological and electrophoretic methods, host-cell impurities etc.

Unit II

- **Test procedures:** ICH guidelines.
- **Potency assays:** In-vitro biochemical methods. cell-line derived assays, whole animal assays etc.

B. Diagnostics:

Unit III

- Principles, methods and applications: Principles and methods of some clinically used diagnostic immunoassays, e.g., homogeneous immuno assays, fluorescence, chemiluminescence and bioluminescence enzyme immunoassays etc., immunosensors.

Unit IV

- Principles, methods applications: DNA probe based diagnostics, sample preparation, hybridization, separation, detection, PCR-RFLP in paternity and forensic cases, SNP detection MALDI and DHPLC.
- Cancer diagnostics, human retroviral diseases specially AIDS. Role of enzymes in diagnostics.
READING MATERIAL

   W. H. Freeman and Company

4. Indian Pharmacopoeia -2007 Vol. 1-3 (Biotechnology products) The IP Commission, Ghaziabad
5. Related review Articles
M. Pharm. Semester-III

SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – III
Interdisciplinary paper - V
Research Methodology Theory
(Three hours per week, 3 credits)

1. Research-Meaning, purpose, Types, (Educational, Clinical, Experimental, historical descriptive, Basic applied and Patent oriented Research) objective of research

2. Literature survey-Use of Library, books and journals-Medlines-Internet, Patent Search, and reprints of articles as a source for Literature survey.

3. Selecting a problem and preparing Research proposals

4. Methods and tools use in research –
   A. Qualities studies, quantitative studies
   B. Simple data organization descriptive data analysis,
   C. Limitation & sources of Error
   D. Inquiries in form of Questionnaire, etc.,

5. Documentation-
   “How” of documentation
   Techniques of documentation
   Importance of documentation
   Use of computer packages in documentation.

   Different parts of the Research paper
   A. Title –Title of project with authors name
   B. Abstract- Statement of the problem, Background list in brief and purpose and scope.
   C. Key Words.
   D. Methology-subject, apparatus, instrumentation & procedure.
   E. Results- tables, graphs, figures & statistical presentation
   F. Discussion support or non support of hypothesis, practical & theoretical Implications
   G. Conclusion
   H. Acknowledgements.
   I. References
   J. Errata
   K. Importance of Spell check for entire project
   L. Uses of footnotes
7. **Presentation** (especially for oral presentation)
   Importance, types different skills, contained, format of model, introduction, Poster, Gestures, eye contact, facial, expressions, stage, fright, volume- pitch, speed, pause & language, Visual aids & seating, Questionnaire

9. Sources for procurement research grants – international agencies, Government and private bodies,

10. Industrial-institution interaction- Industrial projects, their, feasibility reports. Interaction with industries

**Recommended Books: -**

1. Research In Education- John V. Best, John V. Kahn 7th edition
2. Presentation skills - Michael Hallon- Indian Society for Institute education
2. Practical Introduction o copyright.- Gavin Mcfarlane
4. Scientist in legal Systems- Ann labor science
5. Thesis & Assignment – Jonathan Anderson
6. Writing a technical paper- Donald Menzel
8. Protection of industrial Property rights- P. Das & Gokul Das
9. Spelling for the millions- Edna Furmess
10. Preparation for publication – King Edward Hospital Fund for London
11. Information Technology – The Hindu speaks
14. Manual for the preparation of industrial feasibility studies
UNIT-I

1. Intellectual property, importance and types of intellectual property.
2. Paris conventional, World Trade Organization, WIPO and GATT.

UNIT-II

The Indian Patents Act 1970 and Indian patents (Amendments) Act 2005 and issue related to Patents, Importance, parts of patent, type of patent, provisional application, Oppositions, Patent infringement, Patent search engines

UNIT-III

Biostatistics and Various statistical methods i.e. Null hypothesis, t-Test, Regression analysis, ANOVA, Chi-square, etc.

UNIT-IV

Optimization Techniques
Design of experiments, Factorial designs
Grid search technique, Response surface methodology, contour plots, etc.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS

Semester – III (Pharmaceutical Biotechnology)

Subject of Specialization paper – V (Core Subject-VII)

Recombinant DNA Technology and Gene Therapy Theory

(Four hours per week, 6 credits)

Unit I

Recombinant DNA technology: Bacterial transformation, principles of DNA isolation, RNA isolation, southern, northern and western blot, DNA sequencing, cDNA synthesis; Gene cloning; Gene cloning vectors, prokaryotic vectors, shuttle vectors, expression vectors, mutagenesis; PCR, site directed and PCR mutagenesis

Unit I

Plant biotechnology and Animal biotechnology:

Plant transformation methods, genetic engineering in plants for virus resistance, pest resistance, delay of fruit ripening, production of antibodies.

Transformation of animal cells, baculo virus expression system, invitro fertilization, transgenic animals and animal cloning.

Unit III

Second generation molecules: Second generation molecules via site-specific gene alteration, second generation protein program design, examples of engineered proteins of therapeutic potential.

Unit IV

READING MATERIAL
